

✘ For SSI-CEB, SSI-EEB, SSI-MEB, SSI-TEB server motherboards:

If your motherboard is:

- **No wider than 12"** (across the I/O and add-in card side) you can use any **Large size (eATX), Vertical,** or the **HPTX Tech Station.** (or XL-ATX, with overhang)
- **Over 12" Wide** (across the I/O and add-in card side) you must use the **HPTX Tech Station** for best fit. (or XL-ATX, with overhang)

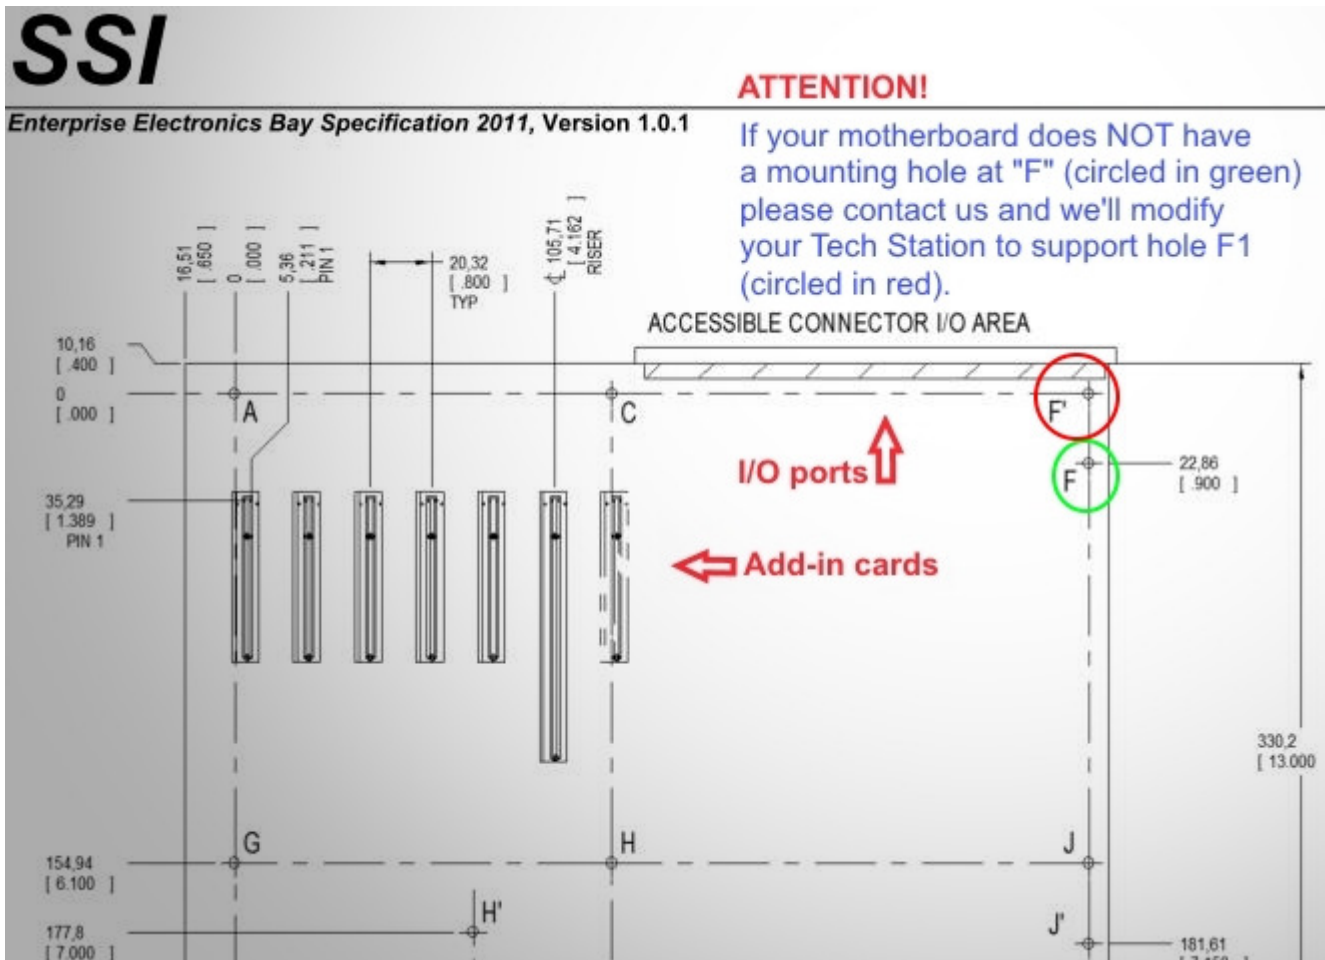

(✘ Refer to diagram below for the following info)

If your motherboard's standoff layout does NOT include hole "F", but DOES have "F1":

- The mounting point "F" is one of the stock ATX standoffs we use on all our benches. To get a standoff located at "F1" we will need to modify your Tech Station prior to shipping it to you. It's a quick customization, and **it's FREE.** Read below for ordering details.

To order a Tech Station configured to include motherboard standoff F1 (circled in red): Simply leave a message in the "notes" section during checkout, saying something like; "hey, I need my bench to have standoff hole F1 added for an SSI mainboard". Or [contact us](#) before placing the order if you prefer.

We'll also leave in the stock hole (F) which can simply go unused until you have a motherboard that needs it, then you can just swap out the nylon bolt and rubber standoff from F1. (If you don't want stock hole F at all, please tell us at the time of ordering.)

Again, **this customization is free of charge**, but we need to hear from you at the time the order is placed.
